

Corporate Social Responsibility

In India, 54 % faces high to extremely high water stress, nearly 17% of the urban population (65 million people) live in slums and more than 50% of the 14 million urban poor families lack access to safe piped water supply. This gap in supply is often met by Urban Local Bodies (ULBs) through provision of community-level standpipes or tankers. However, the quality of drinking water from these sources is usually unsafe, and water supply is often available for only a few hours a day, thus leading to water conflicts at the collection point, water borne disease and also the loss of economic opportunity. More than 100 million people live in areas of poor water quality.

This year on 11th April' 2019 as a company towards our social responsibility, we distributed 5 nos of Water Purifiers (capacity of 100ltr each) to 5 different under privileged schools having high scarcity of healthy water.

The motto of the event was “ Healthy Water Healthy Life”.
